

Sadhana

Product Requirements Document (PRD)

Diurnal Operating Cycle + Seven-Phase Sovereignty

OS

Distilled Master PRD (covers v3.0–v3.4 stack)

Version: 1.0 (distilled)

Date: December 23, 2025

Audience: Product, Design, Engineering

Table of contents

Note: In Word/Google Docs, update fields to generate an automatic TOC. This document is structured with Heading styles for that purpose.

- 1. Product overview
- 2. Principles and non-goals
- 3. Users and key scenarios
- 4. System model (Phase, Mode, Stability, Quadrants)
- 5. The daily arc (24-hour operating cycle)
- 6. Core flows (Front Door, Morning, Day, Evening, Night)
- 7. Practices and modules
- 8. Notifications and adaptive timing
- 9. Weekly rhythm and special days
- 10. Progression, learning, and Ladder
- 11. Safety system, audits, locks, and emergency protocols
- 12. Graduation, maintenance mode, and relapse re-entry
- 13. Data model, privacy, and sync
- 14. Metrics and analytics
- Appendices: Flow diagrams, component inventory, glossary

1. Product overview

Sadhana is a nervous-system-first operating system for daily regulation, safe depth work, and long-horizon self-actualization. The app serves circadian biology and safety gating: it prompts only when biologically relevant, blocks intensity when unsafe or late, and progressively unlocks tools across seven phases of capacity building.

Core promise	Consistency builds the vessel. The routine is the practice.
Primary outcome	Users reliably return to Green (regulated baseline) and learn to channel Yellow (productive activation) without destabilizing sleep, ethics, or identity.
End-state	Graduation: the OS migrates from phone to nervous system; the app becomes optional (mirror, export, re-entry).

1.1 In scope

This PRD specifies:

- The 24-hour operating cycle (five circadian windows) and all time-based rules
- The Front Door closed-loop (sensor snapshot -> mode preset -> mood plot -> drift reconciliation -> primary action)
- Phase and Mode gating (what is available when, and why)
- All daily flows: Morning, Day, Evening, Night; plus Brahma Muhurta high-voltage
- Core practice modules (grounding, coherence, deep work, dreams, silence, neti, serpent) and their safety gates
- Notifications, adaptive timing, and anti-addiction constraints
- Weekly review and special day protocols (Rest, Intensive, Recovery)
- Interactive learning, onboarding, ladder visualization, and mastery indicators
- Graduation, maintenance mode, relapse detection, and rapid re-calibration
- Data model, privacy, and sync rules (local-first, aggregates-only cloud)

1.2 Out of scope

- Therapy or diagnosis; the app is a regulation/training OS, not medical treatment
- Social feeds, leaderboards, streak punishment, XP/points, or addiction mechanics
- Unbounded journaling or rumination loops (timeboxed by design)
- Arbitrary “productivity” optimization divorced from sleep/circadian safety

2. Principles and non-goals

2.1 Product principles

Principle	Meaning in product behavior
Serve the body's rhythm	Time windows are real constraints. The system blocks intensity late and offers depth only in the correct biological windows.
Safety invariant: no voltage without vessel	Upward/activating tools require stability, audits, and demonstrated return-to-Green capacity.
Closed-loop truth	Subjective state + objective proxy (sensors) are reconciled via Drift detection and Soft Audit.
Delight without addiction	Gamification serves understanding and competency, not time-in-app or dopamine chasing.
Local-first privacy	Raw text/audio stays on device; cloud sync is aggregates-only and optional.
Make the app obsolete	The system is successful when users need it less and can self-regulate without prompts.

2.2 Non-goals

- Maximize daily active usage (DAU) at the expense of sovereignty; decreasing dependence is a positive metric in later phases.
- Allow intensity on demand; the app enforces circadian and safety gates even if the user requests otherwise.
- Provide infinite content or “courses”; learning is contextual and minimal.

3. Users and key scenarios

3.1 Primary user personas

Persona	Core needs	Typical phase
P1 - Stabilizer	Often Red/Blue; needs grounding and sleep protection. Limited depth.	Phase 0-1
P2 - Dreamer	Stable enough to capture dreams and name patterns. Needs anti-rumination constraints.	Phase 2
P3 - Weaver	Experiences Yellow. Needs audits and transmutation into output without burnout.	Phase 3
P4 - Connector	Maintains Green baseline; explores coherence and optional dyads.	Phase 4
P5 - Speaker	Practices silence and truth-signal; focuses on clean expression.	Phase 5
P6 - Witness	Eligible for void work (Neti) with mandatory re-entry and dissociation checks.	Phase 6
P7 - Conductor	HV-eligible; can access Serpent only in Brahma Muhurta with kill-switch protection.	Phase 7
P8 - Sovereign	Graduated; uses app only as mirror/export or for re-entry after shock.	Post-grad

3.2 Key scenarios (end-to-end)

1. First app open after waking: sensor snapshot -> morning check-in -> drift check -> route to phase-appropriate morning action.
2. Dream recall (Phase 2+): show Dream Capture card within 3-hour window -> log mood, lucidity, symbols -> save; optionally gate nightmares.
3. Yellow + stable (Phase 3+): Yellow Audit -> Deep Work Preflight -> Bellows -> 25-minute Deep Work -> Output Log -> Return-to-Green check.
4. Evening user tries to start intensity: block Bellows/Deep Work/Neti/Serpent -> route to Coherence/Humming/Gentle Earth/Churn.
5. Night: Seal the Day (multi-screen) -> Night Mode locks UI -> Sleep Shield if user remains active or is Red/Blue.
6. Brahma Muhurta HV access (Phase 6-7): only 4:00-6:00 -> Nyasa required -> Neti/Serpent -> forced downshift + re-entry.

7. Graduation: Sovereignty Audit -> Internal Kriya Test -> Silent Weaver mission -> Maintenance Mode or Leave.
8. Relapse (post-grad): detection (Red/Blue, HRV crash, sleep crash, or user request) -> Rapid Re-Calibration stages -> Serpent lock -> return to sovereignty.

4. System model

4.1 Core primitives

Sadhana is governed by four primitives that drive every experience:

Primitive	Definition	Why it matters
Quadrant	User's current affective/energy state on the Mood Meter (Red, Blue, Green, Yellow).	Determines safety posture and recommended practice.
Mode	System-determined operational mode (Armor, Rebuild, Mirror, Forge, Bridge, Signal, Void, Conductor) based on sensor proxy + context.	Drives Primary Action and tool availability right now.
Phase	Highest safely unlocked capability level (0-7).	Controls what tools can exist for the user at all.
Stability	Core safety metric (0-100) with bands; includes sleep integrity and volatility constraints.	Controls unlocking and high-voltage eligibility.

4.2 Mood Meter quadrants

Quadrant	Energy / Pleasantness	System response
Red	High energy, low pleasantness (fight/flight)	Armor: vent/ground; depth locked until Green.
Blue	Low energy, low pleasantness (collapse)	Rebuild: warmth, rest, sleep protection.
Green	Low energy, high pleasantness (baseline)	Maintain: sustain; optional coherence.
Yellow	High energy, high pleasantness (productive activation)	Forge: eligible but audited; channel into missions/output.

4.3 Stability bands and unlock behavior

Band	Score	Behavior
Unstable	< 60	Phases 4-7 hard-locked; prioritize grounding/sleep; Trends locked.
Settling	60-69	Limited depth; Trends unlocks; still safety-first.
Stable	70-84	Standard progression; Phase 2-5 accessible based on requirements.

Band	Score	Behavior
Radiant	85-89	Neti eligible (Phase 6) with strict checks.
HV-Eligible	>= 90 for 30+ days	Serpent eligible (Phase 7) with master lock and kill-switch.

4.4 Five circadian windows

Window	Time	Biology	Primary function	Hard rules
Brahma Muhurta	4:00-6:00	Cortisol rising; "high voltage" window	HV practices for eligible users	Neti/Serpent only here; Nyasa required; after 6:00, unavailable.
Morning	6:00-11:00	Activation	Check-in, dreams, intentions	Dream capture card only within 3h of wake.
Day	11:00-17:00	Peak output	Deep work, missions, transmutation	Deep Work sessions allowed; prompted only if stable.
Evening	17:00-21:00	Cortisol declining	Return to baseline; close loops	No new Deep Work; no Bellows; no HV.
Night	21:00-4:00	Parasympathetic dominance	Seal, sleep shield, churn	No intensity; Night Mode after seal.

5. The daily arc (24-hour operating cycle)

The daily arc is the primary product surface. All prompts, modules, and blocking behavior are governed by time window + state + phase eligibility. Two rituals are non-negotiable every day: Morning Check-in (within 30 minutes of waking) and Seal the Day (within 60 minutes of sleep).

5.1 Non-negotiables

Ritual	Timing	Duration	Purpose	Hard requirement
Morning Check-in	Within 30 min of waking	10-30s	Establish baseline; capture subjective state	Required daily for stability tracking.
Seal the Day	Within 60 min of sleep	60-90s	Close container; lock night mode; protect sleep	Required daily for sleep protection.

5.2 Daily arc overview (time windows)

Brahma Muhurta (4:00-6:00) -> Morning (6:00-11:00) -> Day (11:00-17:00) -> Evening (17:00-21:00) -> Night (21:00-4:00)

HV (if eligible)	Dreams/Intentions	Output/Deep Work
Return to Green	Seal/Sleep Shield	

6. Core flows

6.1 Front Door (every meaningful app open)

Trigger: first foreground open after ≥ 10 minutes background OR first open after wake.

- A. Sensor Snapshot (silent, 2-6s): HRV, sleep, HR, movement (if available)
- B. Mode Pre-set: system chooses mode before user interaction
- C. Morning Check-in / Mood plot: capture subjective quadrant (MoodPlotGrid)
- D. Drift Check: compare subjective quadrant vs sensor proxy quadrant
- E. Route:
 - Drift -> Soft Audit Sheet
 - Aligned -> Home (Primary Action Card + available tools)

6.1.1 Drift reconciliation (Soft Audit Sheet)

If subjective and objective signals disagree, the system pauses escalation and offers a soft reconciliation (never accusatory).

User choice	Behavior
Downshift (recommended)	Route to grounding (Phase 1 protocols).
Re-plot mood	Re-open MoodPlotGrid; allow user to adjust.
Proceed anyway	Require friction: 10-second breath confirmation + checkbox 'I feel safe and present'.

6.2 Morning flow (6:00–11:00)

Primary purpose: establish baseline; capture dreams (Phase 2+); set mission/intentions (Phase 3+).

6.2.1 Wake sequence (first app open after wake)

- 1) Sensor Snapshot (silent, 2-6s)
- 2) Mode Pre-set
- 3) Morning Check-in card (MoodPlotGrid - compact)
- 4) Drift Check
- 5) Route to primary action (phase- and state-aware)

6.2.2 Phase-specific morning routing

Phase	Morning flow	Notes / hard rules
Phase 1 (Foundation)	Check-in only; if Red/Blue -> Heavy Earth (3:00) -> re-check	No dream work; no intensity.
Phase 2 (Flow)	Check-in; if dream remembered -> Dream Capture (≤ 60 s) within 3h window; handle nightmare gate	Dream card disappears after 3h post-wake.

Phase	Morning flow	Notes / hard rules
Phase 3 (Fire)	Check-in; Dream Capture optional; if Yellow and audit passes -> Mission selection	Yellow Audit may intercept before mission.
Phase 4 (Resonance)+	Check-in; Dream Capture; Intention Resolution check (if set); Dyad Status card (if active); Mission selection (if Yellow)	Dyad availability depends on partner stability.
Phase 6-7 (Vision/Union)	If 4:00-6:00 and HV-eligible -> Brahma Muhurta prompt (Nyasa gate) else standard morning flow	After 6:00, HV options hidden/locked.

6.3 Day flow (11:00–17:00)

Primary purpose: transmutation and output. Deep Work and Missions are available only when time-of-day and safety gates allow.

6.3.1 Deep Work (Phase 3+)

Trigger: user initiates OR system prompts when Yellow + stable

Pre-flight:

- Current state: Yellow
- Audit: Verified/Mixed; Yellow Audit passes
- Sleep $\geq$ 7h (recommended); jaw tension low; HRV resilient

Session:

- 1) Bellows Breath (90s)
- 2) Intention Set (15s, 1 line)
- 3) Deep Work Timer (25:00) - minimal UI, no interruptions
- 4) Output Log (30s, 1 line + post-mood plot)
- 5) Return Check: are you in Green? If no -> grounding prompt

6.3.2 Mid-day check-in (optional)

Trigger: $\geq$ 4 hours since last check-in AND user opens app. Offer quick mood plot or skip if still Green.

6.4 Evening flow (17:00–21:00)

Primary purpose: return to Green, process, and close loops. The system actively discourages intensity.

6.4.1 Blocked practices in evening

- Bellows
- Deep Work (new sessions)
- Neti
- Serpent
- Transmute Now (as escalation)

6.4.2 Available practices in evening

- Coherence breath
- Humming/Drone (vagal toning)
- Gentle Earth
- Journal (Reflect)
- Churn (discharge before sleep)

6.5 Night flow (21:00–4:00)

Primary purpose: sleep protection. Seal the Day closes the container and enters Night Mode.

6.5.1 Seal the Day (60–90s)

Trigger: user-initiated OR 90 minutes before typical sleep time

Screen 1: Day Review (check-ins, practices, mission status, quadrant journey)

Screen 2: Final Mood Plot

Screen 3: Gratitude (optional, 1 line)

Screen 4: Seal complete -> Night Mode

6.5.2 Night Mode

- Extreme dim UI (suggest 5% brightness)
- No notifications until morning
- Only Emergency Downshift available
- Red-light color scheme (no blue)

7. Practices and modules

Practices are modular tools surfaced contextually. Availability is governed by Phase (capability), Mode (right now), Time window (circadian), and Safety locks/cooldowns.

7.1 Core practice catalog

Practice	Duration	Purpose	Availability	Key gates
Heavy Earth	3–5 min	Grounding; reduce high arousal	Any time; primary in Red/Armor	None; blocked only if user already sealed and not emergency.
Gentle Warmth	5 min	Restore energy from Blue/low state	Any time; Rebuild mode	None.
Coherence Breath	5 min	Return to baseline; vagal tone	Day/Evening; Bridge mode	Preferred in Evening; available most times.
Humming/Drone	3 min	Vagal toning; downshift	Evening	Not used as activation.
Dream Capture	<= 60s	Dream logging + symbols	Morning, Phase 2+	Only within 3h after wake; Nightmare Gate may lock.
Shadow Dex / Complex Capture	1–2 min	Name patterns/complexes	Day/Evening, Phase 2+	May be limited during instability.
Churn (Burn)	3 min	Discharge; text discarded	Night (and Evening if needed), Phase 2+	Night window preferred; no backspace UI.
Mission Engine	30s choose + execution	Daily behavioral mission	Morning selection + Day execution, Phase 3+	Time-of-day filtering; no output missions at night.
Bellows Breath	90s	Activation for transmutation	Day, Phase 3+	Blocked after 17:00; blocked when sleep at risk.
Deep Work	25 min	Focused output block	Day, Phase 3+	Blocked after 17:00; requires Yellow Audit pass.

Practice	Duration	Purpose	Availability	Key gates
Silence Seal	4 hours	Speech fast; expression hygiene	Phase 5+	Requires stable state; can be broken without penalty.
Neti (Slicing)	5–7 min + re-entry	Witness work (dissolution)	Brahma Muhurta only (4–6), Phase 6+	Nyasa required; mandatory re-entry; dissociation check; cooldown if flagged.
Serpent (Sushumna Rise)	6–12 min + forced downshift	High-voltage union work	Brahma Muhurta only, Phase 7	Nyasa required; master lock; kill-switch; 7-day cooldown if triggered.
Sleep Shield	5–10 min	Late-night downshift for sleep	Night; also when red/blue at seal	Only module available post-seal besides emergency.
Emergency Downshift / Vent	1–3 min	Acute safety override	Always available	Full-screen takeover; minimal choices; must be accessible everywhere.

7.2 Aghora integration add-ons

Advanced modules that enhance depth work and security:

Module	Purpose	Availability / requirements
Nyasa (Energetic Firewall)	Mandatory vessel preparation before Neti/Serpent	Required before every Phase 6–7 depth session.
Yantra Focus Interface	Concentration UI for Deep Work, Coherence, Neti	Phase-appropriate yantras; Bindu point for Phase 6–7.
Dream Intention + Intention Check	Pre-sleep intention and next-day resolution check	Phase 4+; shown in Evening and next Morning.
Smashan (Mortality Meditation)	Confront mortality; deepen detachment with embodiment	Phase 5+, Stability ≥ 85 .
Ojas Transmutation	Redirect arousal/desire into creative output	Phase 3+, Yellow quadrant; routes into Deep Work or Mission.

8. Notifications and adaptive timing

Sadhana is not a notification machine. Prompts are biologically relevant, minimal, and user-controllable.

8.1 Notification types and limits

Notification	Max frequency	Eligibility	User control	Default copy
Morning check-in	1/day	30 min after typical wake time	Can disable	Good morning. 10 seconds to check in.
Dream capture window	1/day	Phase 2+; within 3h after wake	Can disable	Dream window open. Capture before it fades.
Mission reminder	1/day max	If mission accepted + still open	Can disable	The Draft - still open. Complete or release?
Seal reminder	1/day	90 min before typical sleep time	Can disable	Day's end approaching. Ready to seal?

Total max notifications: 4/day (most users: 2-3).

8.2 Smart timing (learned patterns)

Pattern learned (7-day avg)	Used for	Adjustment rules
First check-in time	Typical wake time	Schedules morning prompt ~30 min after; respects do-not-disturb.
Seal completion time	Typical sleep time	Schedules seal reminder ~90 min before.
Deep Work initiation history	Work window inference	Optional Day prompt for deep work when Yellow + stable.
Recurring low points (Red/Blue)	Pre-emptive grounding offers	Offer micro-downshift cards on app open, not push spam.

8.3 Rules and constraints

- No notifications in Night Mode (post-seal) until Morning window.
- No 'response required' copy; notifications are invitations, not obligations.
- If user disables notifications, the system remains fully functional via on-open prompts.

9. Weekly rhythm and special days

9.1 Weekly review

Trigger: Sunday evening by default (user-selectable day).

Element	Displayed	Purpose
Check-in completion	e.g., 19 of 21 (90%)	Consistency visibility without streak pressure.
Practice count	Total and by type	Competency and pattern detection.
Mission outcomes	Done/Failed/Skipped	Integrity and calibration.
Quadrant distribution	Green/Yellow/Blue/Red percentages	Stability and volatility awareness.
Stability trend	delta week-over-week	Safety and readiness tracking.

9.2 Integrity map (Phase 3+)

A weekly wheel showing mission pillar balance (Restraint, Truth, Service, Output, Recovery).

The system suggests underrepresented pillars for next week; no punishment language.

9.3 Pattern card rotation

Day	Pattern category (one insight/day)
Mon	Trigger correlation
Tue	Recovery insight
Wed	Sleep connection
Thu	Practice efficacy
Fri	Sensor insight
Sat	Mission pattern
Sun	Weekly summary

9.4 Special days

9.4.1 Rest Day

User can mark a day as Rest Day: no missions, no output pressure. Only check-in, dream capture (Phase 2+), optional coherence, and seal.

Frequency limit: max 2 rest days/week; exceeding triggers review messaging.

9.4.2 Intensive Day (Phase 4+)

Requirement	Threshold
Stability	≥ 80
Sleep last night	$\geq 7h$
Recent Red	No Red in past 48h

Behavior: multiple Deep Work blocks allowed; extended Neti only if Phase 6+; extra seal + recovery check required; must return to Green by evening.

9.4.3 Recovery Day (post-relapse)

During Rapid Re-Calibration, days may be auto-marked Recovery: grounding + sleep shield only; no depth work until recovery stage advances.

10. Progression, learning, and Ladder

10.1 Phases vs Modes (two-axis identity)

Phase represents unlocked capability; Mode represents the present biological state. A Phase 7 user in Armor Mode receives Phase 1 treatment. Phase is potential. Mode is reality.

10.2 Phase unlock requirements (canonical)

Phase	Name	Stability	Duration	Additional requirements (examples)
0	Initiation	-	Days 0-3	Complete onboarding; risk gate; grounding contract.
1	Foundation	-	Days 1-30	Daily check-in + seal habits established.
2	Flow	≥ 70	14 consecutive days	No 2-night sleep crash pattern.
3	Fire	≥ 70	Phase 2 complete	Consistent dream + shadow work.
4	Resonance	≥ 75	Phase 3 complete	7 missions complete.
5	Expression	≥ 80	Phase 4 complete	5 Dyad sessions (if dyads enabled).
6	Vision	≥ 85	30 days at Radiant	Clean dissociation checks; Nyasa required.
7	Union	≥ 90	30+ days HV	Master lock requirements; kill-switch protection.

10.3 Ladder visualization

The Ladder is the primary long-horizon progress view:

- Shows all 7 phases in a vertical spine/ladder
- Current phase highlighted; completed phases checkmarked; locked phases show requirements on tap
- Phase detail view lists unlocked tools, usage counts, and remaining requirements for next phase

10.4 Interactive learning layer

Learning is contextual and competency-building; it is not content consumption.

Learning mechanic	When it appears	Anti-addiction guard
First-launch onboarding sequence (5 screens)	First app launch	Completes in < 3 minutes; skippable but not prominent.
Phase unlock ceremony	When a phase unlocks	Reflection, not confetti; 3–5 swipeable cards.
Tool intro flow (3 screens)	First use of a tool	Skippable; tracks completion; no points.
Concept explainers	Help/context taps	Short, interactive; one idea per screen.
Micro-learning cards	Triggered by data patterns or first events	Dismissable without penalty.
Practice previews	Before long practices	Clear expectations; can decline without consequence.
Mastery indicators	After repeated tool use	Competency markers; no XP.

10.5 Gamification boundaries

- No points/XP, no leaderboards, no social comparison.
- No punitive streaks; use a consistency calendar that shows patterns (Complete/Partial/Missed).
- No infinite scroll; review surfaces limited cards and one insight at a time.

11. Safety system, audits, locks, and emergency protocols

11.1 Safety invariants

- Safety overrides all other objectives (missions, output, depth).
- No upward voltage unless the user can return to Green on demand.
- Sleep integrity is protected across all phases; a sleep crash locks depth work.

11.2 Audit stack and confidence levels

Confidence	Definition	Unlock impact
Verified	Sufficient sensor coverage + stable signal	Counts toward standard unlock requirements.
Mixed	Partial sensors or noisy data	Counts; may require more days/usage to unlock.
Self-report	No sensors or permissions denied	Unlocks require extended durations; more conservative gating.

11.3 Major safety locks and cooldowns

Lock	Trigger	Duration	Resolution
Kavacha (Armor)	Red quadrant + overwhelm markers OR Red proxy	Until Green return	Complete grounding protocol.
Nightmare Gate	2 consecutive terror-tagged nights	Until 3 stable nights	Auto-revert to Phase 1 behavior; dream work locked.
Sleep Emergency	2-night sleep crash pattern	Until sleep restored	Force seal mode and sleep shield; lock depth work.
Neti Cooldown	Dissociation flag after Neti	72 hours	Time-based; returns to Phase 1 protocols.
Serpent Cooldown	Kill-switch triggered or surge event	7 days (or more conservative)	Time-based; forced downshift; Phase 1 behavior.
Union Lock	Partner destabilized (dyad)	Until partner stable	Dyad paused; supportive messaging.

11.4 Yellow Audit (Phase 3+)

Yellow is eligible but audited. The Yellow Audit intercepts attempts to escalate into Forge/Deep Work.

Audit question	Fail criteria (examples)	On fail
Hours slept last night?	< 6h	Route to grounding or recovery.
Jaw tension now?	High	Route to grounding.

Audit question	Fail criteria (examples)	On fail
Can you drop to Green in 60 seconds?	No	Block escalation; offer Coherence/Heavy Earth.

11.5 Nyasa (mandatory firewall) before depth work

Before any Neti or Serpent session, Nyasa is required and cannot be skipped (only canceled).

Nyasa step	Body point	Duration
1	Crown	15s
2	Third Eye	15s
3	Throat	15s
4	Heart	20s
5	Solar Plexus	15s
6	Sacral	15s
7	Root	15s
8	Integration (hands together)	30s

11.6 Emergency Downshift / Vent (always available)

An always-available full-screen safety override accessible from every screen. Used for panic, overwhelm, or voltage spikes. Navigation may be locked briefly to ensure completion.

12. Graduation, maintenance mode, and relapse re-entry

12.1 Graduation eligibility (Phase 7 complete)

Requirement	Threshold	Notes
Stability	≥ 90	System-calculated; sustained safety.
HV-Eligible duration	30 consecutive days	No breaks.
Manual grounding prompts	0 in final 30 days	User self-regulated without interventions.
Clean Serpent sessions	10+ sessions	No kill-switch triggers.
Dissociation markers	0 in final 60 days	All Neti re-entries clean.
Weaver complete	All pillars balanced	Integrity Map indicates completion.

12.2 Sovereignty Audit (final gate)

When eligibility is met, the system prompts a two-part audit:

Test	What happens	Pass criteria	Fail behavior
Test 1: Stability persistence review	System shows last 30-day summary (stability, sleep crashes, overwhelm spikes, self-initiated practices).	All hard requirements satisfied.	Audit not offered.
Test 2: Internal Kriya Test (live)	User plots current state, then regulates without app guidance during a 3:00 timer; re-plots.	Shift to Green within 180 seconds.	Audit returns in 7 days; no shame language.

12.3 Final exit mission: Silent Weaver

After passing the Sovereignty Audit, the user enters a 48-hour mission with no app usage.

- If the app is opened, show only a countdown timer.
- No practices or logging available.
- Emergency Downshift remains available, but using it marks mission incomplete.
- After 48 hours, the user performs a final MoodPlot check-in.

12.4 Graduation ceremony and post-grad options

Option	Behavior
Maintenance Mode	Minimal UI; no prompts/notifications; optional mood check-in; history/patterns/export; re-entry available.
Mentor Mode	Coming soon; opt-in interest only.
Leave Sadhana	Export data; delete account; confirm irreversibility.

12.5 Relapse detection and Rapid Re-Calibration

Graduation does not imply permanent immunity. Relapse is treated as a normal, compassionate re-entry.

Trigger	Source	Response
Red/Blue logged (first since graduation)	User	Offer Rapid Re-Calibration.
HRV < 50% of graduation baseline	Sensors	Offer Rapid Re-Calibration.
Sleep crash pattern (2 nights)	Sensors or self-report	Offer Rapid Re-Calibration.
User requests re-entry	Explicit	Begin Rapid Re-Calibration.

Re-entry safety rule: Phase 6/7 (Serpent) is hard-locked for 14 days following any re-entry event.

12.6 Rapid Re-Calibration stages (compressed)

Stage	Focus	Typical duration	Available practices
1: Ground	Muladhara safety	1–3 days	Emergency Vent, Heavy Earth, Sleep Shield.
2: Purge	Svadhithana discharge	3–7 days	Shadow Purge, Churn, Dream Capture.
3: Reconnect	Heart + voice re-open	7–14 days	Resonance, Humming, Essential Truths.
4: Reintegrate	Return to full access	Ongoing	All tools except Serpent until lock expires.

13. Data model, privacy, and sync

13.1 Data principles

- Local-first: raw text entries and audio notes are stored encrypted on-device.
- Cloud sync is optional and aggregates-only (no raw text, no audio).
- Users can export their data at any time; “Leave Sadhana” includes delete options.
- Churn content is provably discarded; only a sentiment score and metadata are retained.

13.2 Core entities (canonical)

Entity	Key fields (examples)	Notes
CheckIn	timestamp, mood_x/y, quadrant, body_zone, word, tier	10–30s baseline entry.
PracticeSession	module, duration, pre/post mood, tier, shift_detected	Auto-saved on completion.
DreamLog	mood, lucidity_level, symbols[], audio_ref, pattern_extracted	Morning only; time-windowed.
ComplexCapture	name, somatic_zone, trigger_context, expiry, integrated	Decay/expiry to prevent collecting.
Mission	pillar, tier, mission_id, status, reflection	Integrity tracking.
DeepWorkLog	intention, output, duration, return_check	Generated after Deep Work timer.
NetiSession	uncoupling_count, reentry_complete, dissociation_check	Mandatory re-entry.
SerpentReport	spine_node, intensity, killswitch_triggered, safety_outcome	High-voltage audit trail.
SafetyEvent	type (vent/killswitch/lock), context, timestamp	Drives cooldowns and patterns.

13.3 Sensor integration

Primary sources: Apple HealthKit (iOS), Health Connect (Android), wearable integrations as available.

Signal	Proxy for	Used for
HRV trend	Vagal tone / resilience	Mode preset; Yellow eligibility; sleep-at-risk detection.
Heart rate volatility	Arousal level	Red proxy; kill-switch triggers in HV contexts.
Sleep duration/quality	Recovery integrity	Stability score; gating deep work and HV.

Signal	Proxy for	Used for
Movement	Context / stillness	Kill-switch triggers (HR spike while still).

14. Metrics and analytics

14.1 Product success metrics

Metric	Why it matters	Target direction
Morning check-in completion rate	Habit formation; baseline capture	Up.
Seal completion rate	Sleep protection; closure	Up.
% days with Green at end-of-day	Baseline regulation success	Up.
Average return-to-Green time after Red/Yellow	Regulation skill	Down.
Sleep crash frequency	Safety & stabilization	Down.
Safety events (killswitch, dissociation, nightmare gate)	Risk detection	Down (but not hidden).
Mission integrity (done vs failed)	Right-sized challenge	Healthy balance; avoid perfection bias.
Time-in-app for advanced users	Sovereignty/internalization	Down in later phases.
Graduation rate and time-to-graduation	End-state achievement	Up (quality gated).
Relapse recovery time (post-grad)	Safety net effectiveness	Down.

14.2 Analytics boundaries

- No content analysis of raw journal text unless explicitly on-device and user-consented.
- Aggregate-only metrics in cloud; personal insights computed on-device.
- No dark patterns: metrics never used to increase compulsion or notification frequency.

Appendix A: Master flow diagrams (text)

FLOW A1: First open after wake

[App open] -> [Sensor Snapshot] -> [Mode preset] -> [Morning Check-in] -> [Drift?]

-> (Yes) [Soft Audit] -> [Downshift/Re-plot/Proceed w/ friction]

-> (No) [Home] -> [Dream Capture?] -> [Mission?] -> [Done]

FLOW A2: Deep Work (Phase 3+)

[User initiates] -> [Yellow Audit] -> (Pass) [Bellows] -> [Set intention] -> [25:00 timer] -> [Output log] -> [Return check]

(Fail) [Grounding/Recovery]

FLOW A3: Seal the Day (Night)

[Seal reminder or user] -> [Day review] -> [Final mood plot] -> [Gratitude optional] -> [Seal complete] -> [Night Mode]

FLOW A4: Brahma Muhurta HV

[4:00-6:00 + eligible] -> [Nyasa required] -> [Neti or Serpent] ->

[Re-entry/Downshift] -> [Return to Green confirmation]

Appendix B: Component inventory (consolidated)

Component IDs referenced across the stack (not exhaustive):

Set	Examples
Daily Routine (DR-xx)	DR-01 MorningCheckin; DR-02 DreamCapturePrompt; DR-05 DeepWorkPreflight; DR-11 SealFlow; DR-12 NightMode; DR-15 BrahmaMuhurtaPrompt.
Safety & Closed-loop (S-/CL-/G-)	SoftAuditSheet; ProceedFriction; YellowAudit; DissociationCheck; KillSwitchOverlay; SensorSnapshot; StateStrip.
Aghora Layer (AG-xx)	AG-01 NyasaProtocol; AG-03 LucidityTracker; AG-07 YantraFocus; AG-09 SmashanMeditation; AG-10 OjasTransmutation.
Graduation/Relapse (GR-/RL-/EV-)	GR-01 SovereigntyAudit; GR-02 InternalKriyaTest; GR-03 SilentWeaverMission; RL-02 RapidReCalibration; EV-01 EmergencyVentOverlay.

Appendix C: Glossary (selected)

Term	Definition
Adhikara	Competency gating principle: no shakti without vessel.

Term	Definition
Brahma Muhurta	4:00–6:00 AM high-voltage window; Neti/Serpent only here.
Drift	Mismatch between subjective mood quadrant and objective sensor proxy quadrant.
Green	Regulated baseline; parasympathetic coherence.
Kavacha	Armor mode/lock: grounding-only until Green return.
Nyasa	Mandatory pre-depth firewall protocol (Phase 6–7).
Ojas	Vitality accumulated through transmutation (Yellow -> output).
Phase	Unlocked capability level (1–7).
Mode	Right-now operational state derived from physiology/context.
Seal the Day	Night ritual that closes the container and enables Night Mode.
